#### Designed to Meet

ACI 318;AS3600;ASTM A970

### ADDITIONAL PRODUCT DETAILS

The one-piece D6 mechanical anchor is used when there is not an adequate length of reinforcing bar to be threaded in a standard nVent LENTON threading machine. This anchor is ideal for use in segmental construction when the mating elements have limited space or are severely congested. This system, when combined with the nVent LENTON Form Saver, eliminates hooked bar congestion, protruding dowels and the need to drill holes in expensive formwork.

Bar dimensions and weights listed may vary by region. Coupler sizes not shown may be available by special order. Contact your nVent LENTON representative for more information.
