Products sold (qty of cable; control & monitoring; specialty equipment)	30,000' of Electric Heat Tracing (Self Regulating & Mineral Insulated); associated Power Distribution and Insulation; limited Control & Monitoring replacement	<input type="checkbox"/>	<input type="checkbox"/>
Services provided (detail EPC involvement, cross-function coordination; how we made a difference)	Field Engineering & Design for an emergency plant shut-down of the Albian Sands Energy Plant due to an explosion and fire; this was a replacement project that had to meet specific schedule targets in order to effectively bring the plant back in to operation; Tracer provided all material and construction activities.	<input type="checkbox"/>	<input type="checkbox"/>
Customer Testimonial / Quote	Of specific interest in this project was the Quality Program that Tracer put into effect. There were two other contractors on site (local electrical contractors) installing electric heat tracing (Base Plant; AOSD-related Expansion); Colt (an engineering firm based out of Calgary) did a 3 rd party audit on all three contractors; found all Tracer installations to be acceptable; had a 40-50% acceptance level on the other two contractors, which wound up costing the owner over \$21MM in "fixes".	<input type="checkbox"/>	<input type="checkbox"/>
